JASON BENJAMIN

AI Product Engineer

Full-stack · LLM applications · EdTech

jsn.benjamin@gmail.com · 010-5371-9266 · Seoul, Korea · www.jason-portfolio.com

PROFILE

AI product engineer who ships production LLM applications end to end. Sole developer at VodaBi, owning frontend, backend and database for a voice-AI sales training platform. Has also built six AI education products for the Korean market, drawing on 10+ years in Korean classrooms and an M.Ed. in Educational Management. Works from user discovery through to production, and evaluates AI output with real users and native speakers rather than trusting the model.

EXPERIENCE

Full-Stack Engineer (Sole Developer) · VodaBi July 2026 – Present

Voice-AI sales training platform · Seoul

- Sole engineer on the platform: own the frontend, backend and database in production.
- Revamped the existing voice-testing platform, added an AI coaching layer, and shipped it to production in about 3 weeks.
- Split post-call grading into a separate scoring step and feedback step, so coaching always matches the score.
- Kept the AI customer in role when calls open with background noise or unclear audio.
- Built the staff training screens and manager dashboard from the designer's Figma, with bilingual Korean/English UI.

Founder & Product Engineer · Chekki EdTech Solutions Jan 2024 – Present

AI products for Korean English academies and families · Seoul

Chekki AI — Bilingual Homework App (live on App Store and Google Play)

- Designed, built and launched the app solo: parents scan homework and get bilingual grading.
- Privacy by design: worksheet images are never stored; grading results are deleted after 30 days.

Chekki B2B Command Center — Academy Communication Portal

- Built a Make.com + Gemini pipeline turning teacher notes into bilingual parent messages.

EduPlanner Pro — LLM Scheduling Engine

- A TypeScript solver enforces hard timetable constraints; a reasoning model resolves the conflicts that remain.

Chekki Schools — Academy Platform (final testing, pilot planned)

- Teacher interviews showed AI homework checkers give parents wrong answers because they can't see the curriculum. Built grading grounded in each teacher's answer key, so results match what was taught.
- Foreign teachers record one voice note per class; it becomes a Korean parent report, reviewed by a Korean teacher before families receive it. Rewrote the report prompts after native Korean readers said drafts sounded machine-written.

Benchmark AI — ESL Assessment Platform

- Maps student mastery to CEFR and Cambridge YLE and flags stalled progress early, before parents consider leaving.

Curriculum Lead & Senior Educator · Blend ENG Academy / YBM PSA Seocho Feb 2019 – Feb 2026

EFL/ESL instruction · Curriculum and assessment design · Seoul

- Wrote a 20-volume commercial English textbook series (phonics to test preparation), sold commercially and used daily.
- Designed a school-wide diagnostic benchmark for 100+ students; later the basis for Benchmark AI.
- Ran bilingual parent communication and progress reports as a homeroom teacher.

SKILLS

Engineering: React, TypeScript, Tailwind CSS; backend APIs and databases; voice-AI applications; Make.com, Airtable

AI: LLM integration (Claude, Gemini, OpenAI), prompt engineering, structured JSON outputs, multi-step LLM pipelines, hallucination mitigation, output evaluation with native speakers

Product: Customer discovery, PRDs, 0-to-1 development, bilingual (EN/KR) product design and localisation, go-to-market

Domain: EFL/ESL, CEFR, Cambridge YLE, diagnostic assessment, Korean hagwon market

EDUCATION

Master of Education (M.Ed.) — Educational Management · University of Essex 2022

Bachelor of Commercial Law (LL.B.) · University of the Western Cape 2013
